## Atlanta Office Building Installs LED PAR38 Lamp Installation

### Customer Saves More Than \$700,000.00

**July 14, 2010-Atlanta, GA** –As part of the ongoing effort to reduce energy consumption, maintenance costs and generation of greenhouse gases, office building owners and operators are turning to LED based light bulbs and fixtures.

This building is using more than 1,000 LED 15Watt replacement bulbs in replacement of incandescent 75R30 and 65PAR38 bulbs. It is a simple bulb change that delivers immediate savings by reducing energy costs, eliminating maintenance and reduced HVAC load.

The financial metrics are quite attractive. The building owner will save a total of nearly \$700,000.00 over the useful life of 50,000 hours of the LED bulbs. The LED bulbs come on instantly, are dimmable and the light generated makes it a bright and comfortable office environment. In addition they are installing hundreds of LED MR16 bulbs and LED fixtures for additional savings and positive environmental impact.
