## **Jeness Household LED Light Technology R30 Lamp Installation in Entry Way**

**April 27, 2009-Atlanta, GA** – As part of the ongoing remodeling of our 50's vintage house, all of the lighting in our kitchen, family room, billiard room and entryway had been converted to various sizes of canned lighting.

Our family was an early adopter of CFLs both as a way of saving energy and avoiding the frequent requirement to change bulbs. The CFLs did last longer although, not as long as claimed; however, in other respects, they were disappointing. They are slow to come to full brightness and even at full brightness the light is somewhat lacking and tends to degrade as the bulb ages. Because of the slow start-up, these lights were left on more than needed. As a result, the energy saving was less than expected.

We were just about to switch everything over to halogen bulbs when I discovered LED Light Technology at a Sustainable Atlanta Round Table breakfast meeting. We have now upgraded most of our 4 and 5 inch can lights with the LED Light Technology R30 lamps. These lights address all of the deficiencies of the CFL. They come on instantly and the light generated seems much brighter and more pleasant than the light from the CFLs. We also expect them to save energy and last longer. Thank-you LED Light Technology for enabling my household to stay on the "green" path.
